

SPECIAL EDUCATION, B.A. Teach Pre-K through 12th grade *Improve the lives of students with disabilities.*

THE PROGRAM

You will become a highly qualified special educator and gain the knowledge and skills to positively impact the lives of students with diverse needs. The program will prepare you to work in schools as a multi-categorical special education teacher at all grade levels. You will take courses related to characteristics of mild to moderate multi-categorical disabilities; assessment for special education eligibility and student performance/progress; instructional planning, including development of Individualized Education Programs; evidence-based instructional practices; advanced behavior management; academic and individualized instructional content and curricula; and collaboration with families and other school professionals.

You will participate in field experiences in diverse school classroom settings throughout the program. You will work alongside experienced special education teachers and learn leading-edge teaching methods from award-winning special education professors who will help guide you through these experiences.

All University of South Carolina teacher preparation programs are accredited by the Council for the Accreditation of Educator Preparation (CAEP). State reciprocity and this national accreditation make it easy to become certified in most other states. Our graduates are also well-prepared to enroll in master's degree programs during their first years of teaching.
